PROFILE

AI/ML & Software Engineer with hands on experience in enterprise automation, backend systems, Python, JavaScript, REST APIs, and Generative AI application development. Experienced in building LLM-powered applications, implementing agentic workflows, prompt engineering, and tool-calling architectures. Strong foundation in data structures, algorithms, object-oriented design, databases, and software engineering best practices, with a focus on building reliable, scalable, and production-ready solutions.

EXPERIENCE

Automation Developer

Avery Dennison | (Oct 2025 - Present)

- Design and develop scalable automation solutions that optimize enterprise workflows and reduce manual intervention.
- Write clean, reusable, and maintainable JavaScript code following engineering standards and software best practices.
- Investigate application failures, perform root-cause analysis (RCA), and implement long-term fixes to improve system reliability.
- Collaborate with cross-functional teams in an Agile environment to translate requirements into dependable production solutions.

Backend Developer Intern

Exelon Circuits Private Limited | (Jan 2025 - May 2025)

- Developed and deployed RESTful APIs using Node.js, Express, TypeScript, and MongoDB for scalable backend integration.
- Built secure authentication systems using JWT and OAuth to ensure robust access control.
- Automated test suites and debugged legacy test scripts to minimize deployment defects and enhance application efficiency.
- Collaborated across the entire product lifecycle—design, development, testing, and deployment.

Web Application Developer

Anmaya Technologies Pvt. Ltd., Udupi | (Jun 2025 - Sep 2025)

- Contributed to full-stack web application development, integrating modern frontend interfaces with backend REST APIs.
- Optimized database queries and backend interactions to improve response times and UI responsiveness.
- Participated in peer code reviews, architecture discussions, and team-based coding standards

EDUCATION

Bachelor of Engineering , NMAM Institute of Technology CGPA: 8.75	2021 - 2025
Pre-University Course , Mahatma Gandhi Memorial College, Udupi Percentage: 88.67	2019 - 2021
SSLC (Secondary School Leaving Certificate) , G.P.U High School Percentage: 92.32	2016 - 2019

SKILLS

Generative AI & LLMs: Large Language Models (LLMs), Prompt Engineering, Tool Use / Function Calling, Agentic Workflows, Cohere API, Retrieval / Search Concepts, Streamlit.

Programming Languages: Python, JavaScript, TypeScript, Java, C++, SQL.

Backend & APIs: REST APIs, Node.js, Express, FastAPI/Flask concepts, JWT, OAuth, Postman, Swagger.

Databases: MongoDB, Relational Databases / SQL, Firebase.

Core CS & Engineering: Data Structures & Algorithms, OOP, Model/Pipeline Debugging, Root Cause Analysis (RCA), Unit & Integration Testing, Performance Optimization.

Cloud & DevOps: Git, GitHub, CI/CD basics, AWS (EC2, S3), WebSockets, Linux/OS basics.

TECHNICAL PROJECTS

LLM File Assistant – Generative AI / LLM Tool-Calling Application | [GitHub](#)

- Built an LLM-powered assistant enabling model-driven interactions with local file systems through controlled Python tools.
- Implemented tool functions returning structured, JSON-serializable results for seamless integration into an LLM tool-calling loop.
- Designed tool schemas, function mappings, and an iterative agent execution loop to process model-generated actions and feed context back to the LLM.
- Built a Streamlit interface featuring dynamic query handling, file uploads, and full visibility into LLM-selected tools.

Ecommerce Backend System | [GitHub](#)

- Developed a scalable backend system for an e-commerce platform managing product catalogs, user authentication, and order processing.
- Built RESTful APIs and robust backend architecture utilizing Node.js, TypeScript, Express.js, and MongoDB.
- Implemented secure user authentication and Role-Based Access Control (Admin/User) using JWT.
- Integrated Razorpay for secure, real-world payment processing and transaction handling.

Shopnest: E-commerce Application

- Built a mobile application utilizing Java, OOP principles, and Firebase for real-time data synchronization and secure authentication.
- Implemented modular ordering, catalog display, and user profile management workflows.

CERTIFICATES

- The Data Science course - Adverk.
- Foundations of Cybersecurity - Coursera.
- AWS Cloud Practitioner Essentials.

ACHIEVEMENTS

- **Received the patent for IOT project “Smart Speed Breaker”** - Created a smart speed breaker using ultrasonic sensors to detect people and vehicles at zebra crossings. This idea was officially approved and received a patent.
